EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Corwin Umbach on May 13, 2009.

2. In claim 49, lines 2-3 have been deleted and replaced with ---carbides are controlled by subjecting a steel rod to a hot rolling treatment comprising heating at 1100°C or more followed by hot rolling, and after completion of hot rolling cooling to a temperature range of 400 to 600°C at a cooling rate of 5 to 10°C/sec.
3. In claim 50, line 2, "formed" has been deleted and replaced with --further controlled--.
4. In claim 51, last 3 lines have been deleted and replaced with ---at 1100°C or more followed by hot rolling, and after completion of hot rolling cooling to a temperature range of 400 to 600°C at a cooling rate of 5 to 10°C/sec to produce the steel wire of claim 11. ---
5. Title of application has been amended by inserting --and method of making thereof -- at the end of title.
6. Claims 11 to 14, 43 to 46 and 48 to 57 are allowed.
7. The following is an examiner's statement of reasons for allowance: A hard-drawn steel wire comprising a defined composition and a microstructure consisting of ferrite

and/or pearlite, and said wire further comprises 5 particles/100 μm^2 or less of carbides wherein the circle-equivalent diameters of the carbides are more than 0.1 μm and its method of making, as recited by the claims, are not taught or fairly suggested by the art of record.

8. Claims patentably define over Japanese patent 07090495 in view of US Patent 6,645,319 or Japanese patent 8-120407 for the reasons stated in Applicant's argument filed April 20, 2009.

9. The unapplied references, US Patent 5,846,344; US patent 7,074,282, US Patent 6,322,641, US Patent 5,455,869 and US Patent 6,372,056 have been cited to further depict the state of the art in steel wire. They teach a hard drawn wire having a composition and microstructure of pearlite and/or ferrite that closely meet the claims but do not teach the recited limitation of having 5 particles/100 μm^2 or less of carbides wherein the circle-equivalent diameters of the carbides are more than 0.1 μm ; and such carbide limitation would not be expected since the process of making is different. Note present invention reduces and controls carbides by subjecting steel rod to a hot-rolling treatment comprising heating at 1100°C or more followed by hot rolling, and after completion of hot rolling, cooling to a temperature range of 400 to 600°C at a cooling rate of 5 to 10°C/sec, and this process is not taught or fairly suggested by the art of record. Hence claims patentably define over cited references.

Oath/Declaration

10. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:
It does not include the notary's signature of the fourth and fifth inventor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deborah Yee whose telephone number is 571-272-1253. The examiner can normally be reached on monday-friday 6:00 am-2:30 pm.
